⚠Caution: Before removing the protection cover, power must be turned OFF.

## ■ Connection of Units

### ◎ DS16/D22

- Connect a basic unit, expansion units, a unit-display unit from the left and connect the caps the end of right and left.
- The middle bracket (sold separately) helps to protect deflection when connecting over 7 units. Use one middle bracket per 7 units.
- The basic unit supplies the power for expansion units and the unit-display unit and DATA input.

### ◎ D□40/D□60

Connect expansion connectors of units using a ribbon cable (accessory) as (figure 1).  
If the distance between expansion units is far as (figure 2), you can connect the cable at the soldering pad.  
**To use a soldering pad, remove the protection cover which only expansion units have.**

## Input Data Chart [Serial, Parallel, RS485 Comm.(Slave Mode) Input Model]

When selecting 5-bit data input for the serial input model, or 4-bit data input for the parallel input model, it displays only shaded part (0 to 9, A to F). If there is no input data after supplying the power, the basic unit differently displays by each input method; serial input model displays 'S', parallel input model displays 'P', and RS485 communication input model displays 'T'.

※1: If this data is not for the unit-display unit, it maintains former state.

※The unit-display unit does not use the upper bit over D4. (don't care: X)

※Unit-display unit function

※It is only available to use the unit-display unit with serial 5-bit, parallel 4/6-bit Dynamic 1 input when connecting the unit display unit and turning ON it. (do not input data to the unit-display unit.)

※To display two data using zero blanking function

① Using the unit-display unit: If sending unit data signal after data 1 (00123), it applies zero blanking function when displaying data 2 (04567).

② Not using the unit-display unit: If sending no-unit data (HXXXLLLL) after data 1 (00123), it applies zero blanking function to display data 2. In this case, transmitted data should be added one to the display digits. (no-unit data is added)

When do not using unit-display unit, no-unit data is used for data division. If it does not send no-unit data (HXXXLLLL), it displays data 1 (00123) and data 2 (04567) as one data. Zero-blanking function is applied to data 1 only.

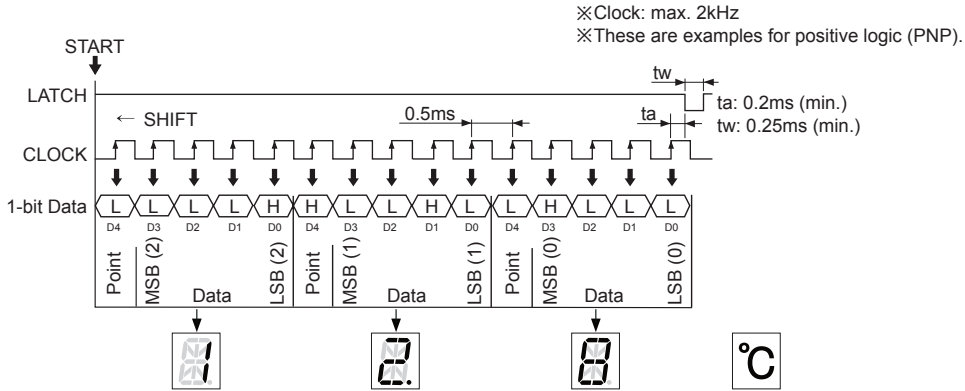

※Do not transfer unit data to basic/expansion unit. Unit bit (D7) of unit data is only for unit. If transferring unit data to basic/expansion unit, unit bit (D7) displays the ignored data value. In this case, Zero blanking does not operate normally.

## ■ Data Input Method [Serial, Parallel, RS485 Comm. Input Model]

### ◎ Serial input model

## ■ Cautions during Use

1. This unit must be mounted on the panel.
2. This is non-insulated product. Use insulated power for power supply.
3. For using Pt temp. sensor input model, you must wire 3-wire. To extend the wire, the thickness and length of 3 wires should be same. If the resistance are different, temperature error occurs.
4. For Pt temp. sensor input, if input value is out of the range, each display unit displays Error message. When it is under min. input value, a unit displays 'L'. When it is over max. input value, a unit displays 'H'.
5. For Pt temp. sensor input model, if Pt temp. sensor is not connected, it displays 'oP' (using 2 units)' or 'oPn' (using 3 units)'.
6. Input signal line
  - ① Shorten the cable distance between the external device and this product.
  - ② Use shield cable when input wiring is long.
  - ③ Wire the input signal line separately from the power line.
7. Dielectric or insulation resistance test when this unit is installed in the control panel.
  - ① Separate the unit from the control panel.
  - ② Short circuit all terminals of the unit.
8. Do not use this unit at below places.
  - ① Place where there are severe vibration or impact.
  - ② Place where strong alkalis or acids are used.
  - ③ Place where there are direct ray of the sun
  - ④ Place where strong magnetic field or electric noise are generated
9. This product may be used in the following environments.
  - ① Indoors
  - ② Max. altitude: 2,000m
  - ③ Pollution degree 2
  - ④ Installation category I
