

NOVOPAD
Position Transducers
up to 200 mm
non-contacting
Series LS1
with analog interface

Special features

- long life up to 100 Mio. movements, depending on application
- compact profile design 18x18 mm
- double-sided supported actuating rod
- pre-assembled ball coupling
- resolution 0.05 % o 0.1 %
- outstanding linearity $\pm 0.15 \%$
- Standard output signals current or voltage
- Teach-In via push-buttons with status LED
- insensitive to magnetic fields
- cable or connector version available

Position transducer with NOVOPAD non-contacting inductive measurement principle on printed circuit board basis, for direct, accurate measurement of travel in display- or feedback applications.

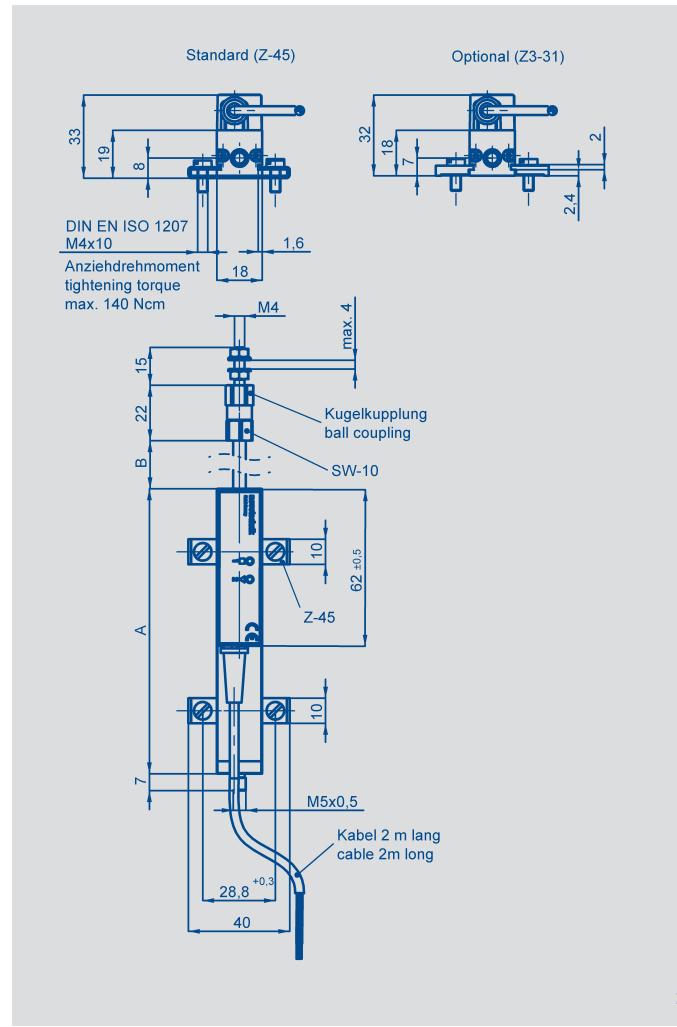

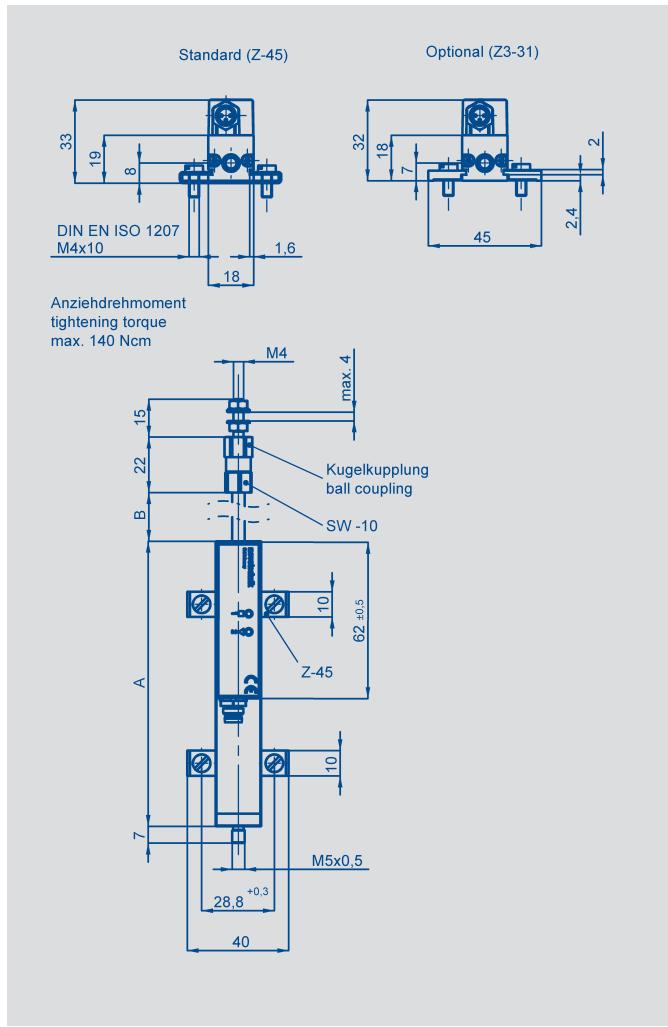

The actuating rod is supported on both ends by slide bearings, allowing high lateral forces on the tip of the rod. The robustness and the compact housing design make the LS1 a reliable solution for industrial environment. A ball coupling enables a backlash- and shear force free operation even with perpendicular or angular misalignment between the transducer axis and the direction of movement.

The integrated signal processor with Teach-In function provides an absolute and proportional current or voltage output signal.

The non-contacting sensors are maintenance and wear-free and convince with an optimal reproducibility, resolution and linearity. The sensor can be exchanged without recalibration. Magnetic fields do not have any effects on the measurement signal.

Description

Housing	Aluminium, anodized
Mounting	adjustable clamps
Actuating rod	stainless steel, AISI 303, external thread M5x0.5
Ball coupling	hardened ball with spring pressure on carbide plate
Bearings	both ends in metal-polymer slide bearings
Measurement principle	NOVOPAD inductive, based on printed circuit board
Electrical connections	3-pin round connector, shielded, M8 x 1 3-wire PVC-cable, 3 x 0.14 mm ² , shielded, 2 m length
Electronic	SMD with ASIC, integrated

Position transducer with NOVOPAD non-contacting inductive measurement principle on printed circuit board basis – with internal return spring – for direct, accurate measurement of travel in display- or feedback applications.

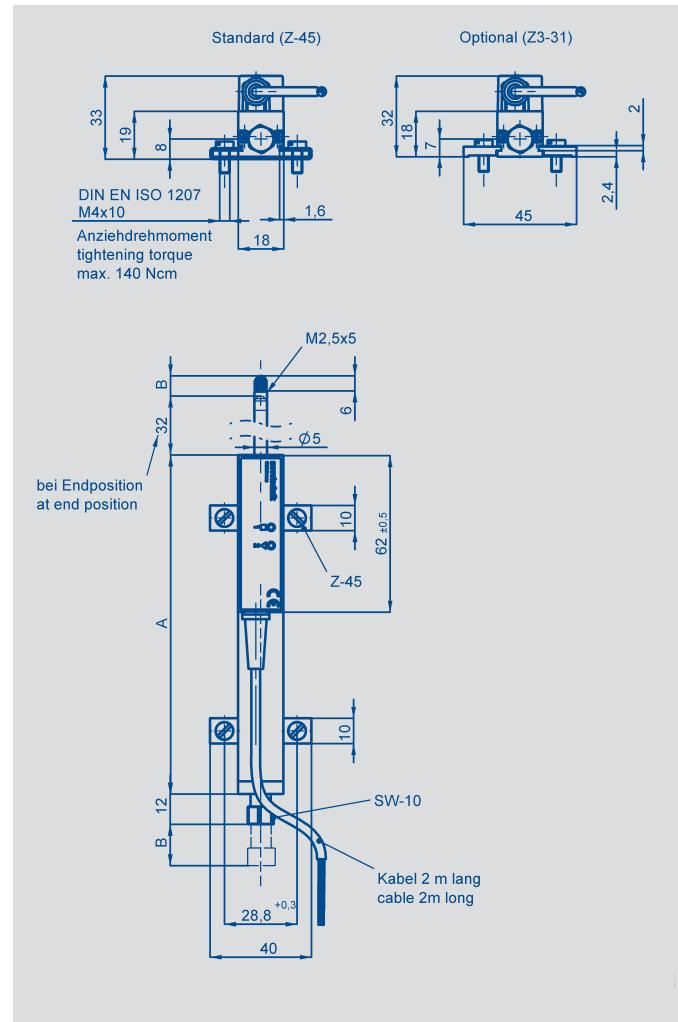

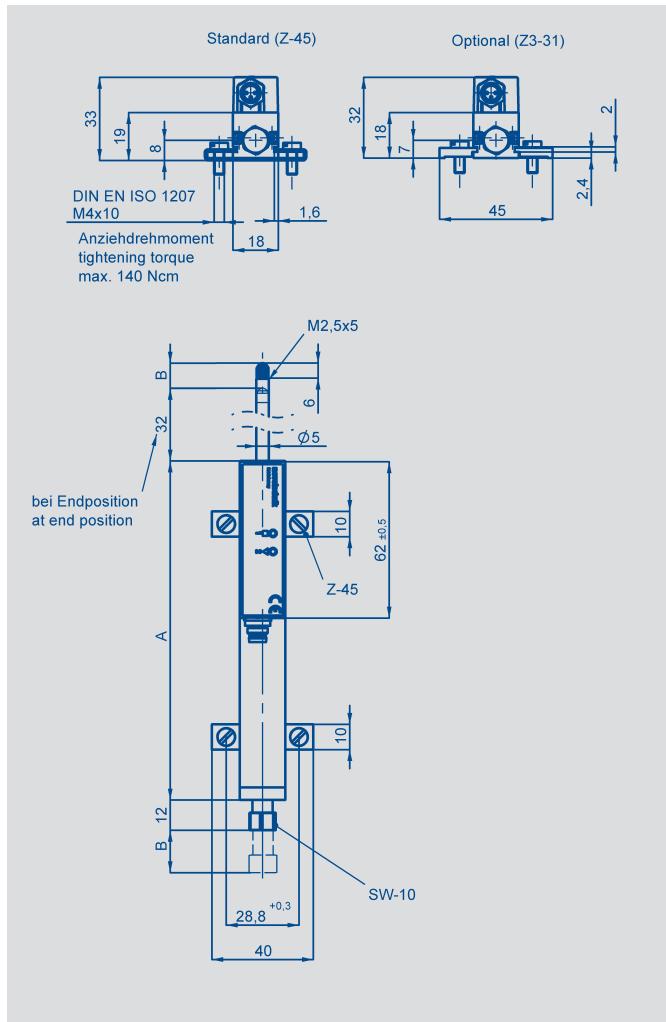

The actuating rod is supported on both ends by slide bearings, allowing high lateral forces on the tip of the rod. The robustness and the compact housing design make the LS1 a reliable solution for the industrial environment. The design of the rear end stop nut on the actuating rod simplifies the connection of actuators like pneumatic cylinders and solenoids.

The integrated signal processor with Teach-In function provides an absolute and proportional current or voltage output signal.

The non-contacting sensors are maintenance and wear-free and convince with an optimal reproducibility, resolution and linearity. The sensor can be exchanged without recalibration. Magnetic fields do not have any effect on the signal measurement.
